

Appendix

April 2025

We provide qualitative descriptions of the 8 genres. Note that the values of soft labels are not absolute per se. Even for professionals, one track can be interpreted in multiple ways. Soft labels are utilized to indicate “Track X is genre A but also expresses some traits of genre B ”, for example, so more information is contained in the label.

- i The first three columns (**xxx. Inst.**) indicate whether the track specifically assign instruments for the parts respectively. For example, some future house tracks do not use chord instruments since their lead sounds can cover the mid frequencies..
- ii **Groove** measures the energy fluctuation of the instrumental part (no percussion) within a beat, from 1 (very present, extremely short attack) to 5 (highly-sidechained)
- iii **Rhythm** discusses how fragmented/off-beat the notes are. We consider the length of notes played by instruments used in the track. 1 means extremely coarse (mainly 1/4 notes and 1/8 notes) and 5 means extremely fine (1/32 notes exist).
- iv **Distortion** describes the extent to which the track use “dirty” and “inharmonic” sounds/effects, such as clipping, flanging, etc. 1 is very clean (hardly any noticeable distortion) and 5 is very harsh (almost distortion in every bar).
- v **Organicity** measures the extent to which the track use organic instruments like acoustic piano/guitar/strings, etc.

Table 1: Determinants of House Music Sub-genres

Genre	Lead Inst.	Chord Inst.	Bass Inst.	Groove	Rhythm	Distortion	Organicity
Progressive House	✓	✓	✓	4-5	1-3	1-2	3-5
Future House	✓	~	✓	3-4	4-5	3-4	1-3
Bass House	✓	✗	✓	2-4	3-4	4-5	1-2
Tech House	✗	✗	✓	3-5	3-4	2-4	1-3
Deep House	✓	~	✓	2-3	1-2	1-2	2-4
Bigroom	✓	✗	✗	1-2	1-3	4-5	1-2
Future Rave	✓	✗	✓	4-5	3-5	2-4	1-2
Slap House	✓	✗	✓	3-4	3-5	1-3	1-2

^a ✓ denotes “yes”, ✗ denotes “no”, and ~ denotes “uncertain”, which could be either yes or no depending on the track.

As commonly stated, we can describe the 8 genres as follows:

1. **Progressive House:** Characterized by its highly melodic structure and regular groove, this genre typically features a main sound composed of super saw synths, piano, and strings. [An example.](#)
2. **Future House:** Defined by its irregular groove and a less pronounced melody compared to Progressive House, this genre is distinguished by an overall tech-driven, futuristic sound. [An example.](#)
3. **Bass House:** Characterized by the absence of a prominent lead instrument or the presence of a non-melodic lead, this genre features minimal chord progression, heavily distorted sounds, and a noisy texture, making it well-suited for outdoor music festivals. It often carries a dark, intense vibe. [An example.](#)
4. **Tech House:** Similar to Bass House but with a less noisy sound profile, this genre is more suitable for dance halls and bars, where the atmosphere is energetic but not as intense. [An example.](#)
5. **Deep House:** Quieter than Tech House, this genre is characterized by a smooth groove, a strong atmospheric presence with large reverb, and a generally slower rhythm. [An example.](#)
6. **Bigroom:** Often referred to as “Festival EDM,” this genre exhibits simple, sometimes trivial musical structure, characterized by its raw, energetic and hyped atmosphere. [An example.](#)
7. **Future Rave:** Marked by a relatively regular groove, this genre features a bass with moderate attack and a wave-like texture. The main sounds often exhibit quite electronic timbres. [An example.](#)
8. **Slap House:** A popular choice for BGM in short videos, this genre typically includes vocals and features a bouncy bass. It often lacks chordal instruments, with the bass providing some mid and high frequencies. [An example.](#)
